PRODUCTS

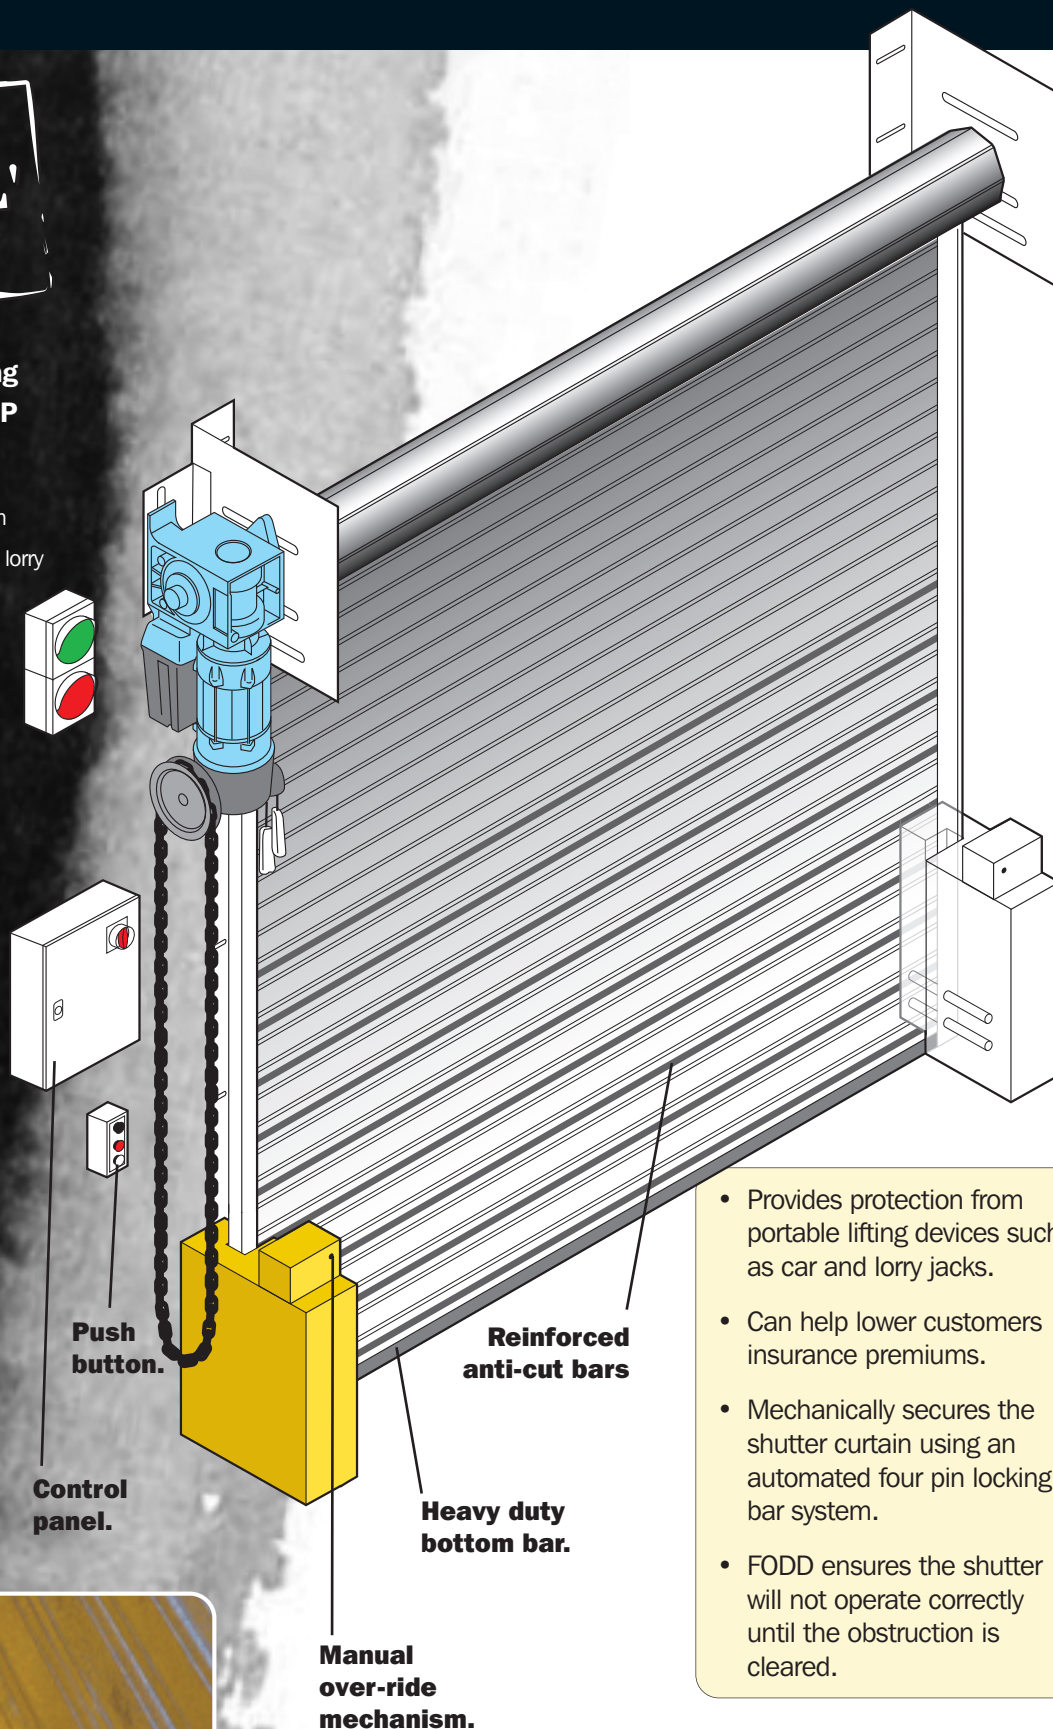

THE 'POWERFUL' SOLUTION

The IRSP anti jacking locking system is unique to the IRSP Secureflex door.

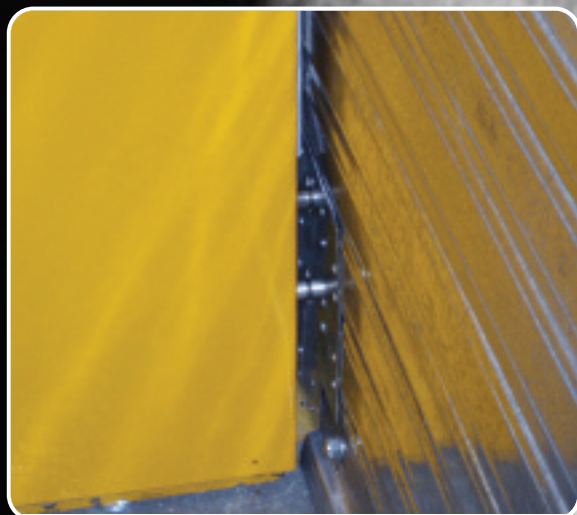

It is designed to provide protection from portable lifting devices such as car and lorry jacks which are commonly used in attempts to gain entry into secure premises.

It gives the advantage of mechanically securing the shutter curtain in place by means of the automated four pin stainless steel locking bar system. This can also help to further lower the customer's insurance premiums.

Obstruction sensing safety devices 'FODD' (Foreign Object Detection Device) are installed within each locking unit, which ensures that when the locking pins are not fully engaged the control system will indicate, via a red flashing beacon, that there is an obstruction and the shutter will not function until the operator has retracted the locks and removed the foreign object.

- Provides protection from portable lifting devices such as car and lorry jacks.
- Can help lower customers insurance premiums.
- Mechanically secures the shutter curtain using an automated four pin locking bar system.
- FODD ensures the shutter will not operate correctly until the obstruction is cleared.
