THE 'PROFESSIONAL' SOLUTION

Patent No. 2 404 215

IRSP

INSULATED
ROLLER SHUTTER
PRODUCTS

Modern criminals use all types of portable cutting equipment to gain entry to:

- Warehouses
- Distribution centres
- Garages/factories
- Maintenance buildings
- Storage facilities

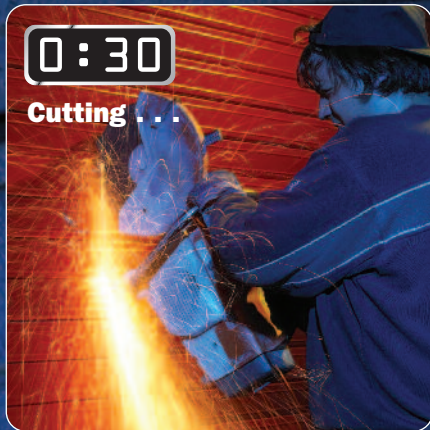

Professional criminal gangs can enter and escape, with the contents of a building within four minutes.

IRSP Secureflex dramatically increases the amount of time the burglar, using high speed cutting equipment, has to spend entering the building. Secureflex offers complete protection for your stock, increases your security and could lower your insurance premiums.

The doors are custom made to fit any opening and are available in many different finishes to suit the needs of any project regardless of its complexity. Secureflex operates in the same way as our Insuflex insulated roller shutter. Due to its lightweight composite patented design and formed outer protection it does not require new mechanisms to operate, but can take advantage of existing motor assemblies.

The tests opposite show a standard roller shutter which is penetrated within 15 - 20 seconds. This compares to the anti-cutting properties of Secureflex, which prevents unlawful entry.

If you want protection from cut and run attacks, Secureflex is the professional solution.

IRSP have a reputation for quality, unrivalled design capability and the most extensive range of roller shutter products in the UK.

Utilising the most up-to-date computer aided design software, superior craftsmanship, innovation and engineering excellence we continuously provide the highest quality products and best service in the industry. All IRSP doors and accessories are manufactured under a strict in-house programme to provide complete customer satisfaction and carry a warranty against defects in material or workmanship. Our policy of on-going research and development for all our products, ensures that they remain the most revolutionary and finest engineered products available in the UK.
